

- Oxidative phosphorylation - Mus musculus (house mouse)
- maintenance of location in cell
- negative regulation of cellular component organization
- tube morphogenesis
- amide metabolic process
- Platelet degranulation
- regulation of protein catabolic process
- Neutrophil degranulation
- Protein processing in endoplasmic reticulum - Mus musculus
- membrane organization
- negative regulation of amyloid-beta formation
- Asparagine N-linked glycosylation
- Extracellular matrix organization
- protein maturation
- positive regulation of endocytosis
- unsaturated fatty acid biosynthetic process
- regulation of apoptotic signaling pathway
- Cellular responses to stimuli
- morphogenesis of an epithelium
- negative regulation of intracellular signal transduction
