

- sensory perception of light stimulus
- retina development in camera-type eye
- monosaccharide catabolic process
- intracellular receptor signaling pathway
- cellular homeostasis
- retina homeostasis
- negative regulation of sodium ion transmembrane tra
- protein localization to organelle
- Cholinergic synapse - Mus musculus (house mouse)
- Glycerophospholipid biosynthesis
- protein localization to non-motile cilium
- Nuclear Receptor transcription pathway
- response to light intensity
- protein localization to cell periphery
- regulation of Rac protein signal transduction
- positive regulation of protein localization
- Insulin signaling
- regulation of small molecule metabolic process
- regulation of microtubule polymerization
- MicroRNAs in cardiomyocyte hypertrophy
