

- hexose catabolic process
- retina development in camera-type eye
- sensory perception of light stimulus
- circadian regulation of gene expression
- regulation of neuron apoptotic process
- spontaneous neurotransmitter secretion
- negative regulation of intrinsic apoptotic signaling pa
- regulation of establishment of protein localization
- mRNA splice site recognition
- Factors and pathways affecting insulin like growth fac
- intracellular receptor signaling pathway
- cellular response to hypoxia
- response to light stimulus
- protein localization to vacuole
- Mapk signaling pathway
- Ca²⁺ pathway
- microtubule cytoskeleton organization
- positive regulation of apoptotic process
- peptidyl-glutamic acid modification
- positive regulation of icosanoid secretion
