

- transcription by RNA polymerase II
- TNF signaling pathway - Mus musculus (house mouse)
- Cellular responses to stimuli
- negative regulation of actin filament bundle assembly
- vasculature development
- Adaptive Immune System
- regulation of transcription by RNA polymerase I
- negative regulation of ERK1 and ERK2 cascade
- response to endoplasmic reticulum stress
- AGE-RAGE signaling pathway in diabetic complications
- positive regulation of biomineral tissue development
- labyrinthine layer blood vessel development
- camera-type eye development
- regulation of cell morphogenesis
- response to glucocorticoid
- intracellular zinc ion homeostasis
- White fat cell differentiation
- negative regulation of cell population proliferation
- circadian regulation of gene expression
- protein localization to organelle
