

- Metabolism of amino acids and derivatives
- small molecule catabolic process
- Macroautophagy
- aerobic electron transport chain
- viral translation
- Regulation of cytoskeletal remodeling and cell spread
- Autophagy - animal - Mus musculus (house mouse)
- Programmed Cell Death
- Recognition of DNA damage by PCNA-containing re
- positive regulation of translation
- Asparagine N-linked glycosylation
- retrograde protein transport, ER to cytosol
- Gap junction - Mus musculus (house mouse)
- Neutrophil degranulation
- Glycolysis and gluconeogenesis
- Peroxisomal lipid metabolism
- negative regulation of intracellular signal transduction
- protein stabilization
- muscle structure development
- secretion by cell
