

- positive regulation of muscle cell apoptotic process
- response to light stimulus
- Protein processing in endoplasmic reticulum - Mus m
- Processing of Capped Intron-Containing Pre-mRNA
- negative regulation of DNA damage response, signal
- negative regulation of protein serine/threonine kinase
- peptidyl-threonine phosphorylation
- proteolysis involved in protein catabolic process
- regulation of muscle cell differentiation
- regulation of muscle adaptation
- Ovarian tumor domain proteases
- regulation of mRNA splicing, via spliceosome
- cellular response to estrogen stimulus
- regulation of endothelial cell differentiation
- regulation of binding
- tube morphogenesis
- negative regulation of cytoplasmic pattern recogniti
- positive regulation of translation
- Hippo signaling pathway - Mus musculus (house mou
- vacuolar transport
